## Introduction Guide to Unicist Technologies

Functionalist technologies  
manage the roots of the  
functionality of things and  
the root causes of problems

# **The Functionalist Principles of the Unicist Technologies**

Unicist technologies manage the unified field of processes. They are based on the use of functionalist principles to manage the roots of the functionality of things and the root causes of problems.

The purpose of the use of unicist technologies is to define the binary actions that produce results.

The functionalist principle defines that there is nothing in the universe, which is part of a system, that does not work with a purpose, an active and entropic function, and an energy conservation function. This structure works through unicist binary actions (UBA) that produce the functionality of any entity or process, whatever it's kind.

Unicist technologies manage the unified field of facts integrating them with their context using the functionalist designer and the unicist compass.

The mathematics of the unicist logic allows quantifying the fundamentals of the functionalist principles to build binary actions, which on the one hand open possibilities, and on the other hand, ensure results.

You can use the “Experiencing APP” of the Unicist Business Compass to experience the operational functionality of the functionalist principles and their binary actions.

It is based on Unicist AI that uses the unicist logic that was developed emulating the intelligence that underlies nature and human intelligence.
